DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by El-Sharkawi et al (US patent 5134356).

Claim 1, El-Sharkawi et al discloses a reactive power compensator comprising determining reactive power in the motor windings by using means 50, voltage detectors 54, current detectors 58, means 70; and maintaining a switch 114, which is connected between a power supply and an inductive load in a non-conducting state based on the determined reactive voltage.

Claim 2, El-Sharkawi et al describe in the description of figure 13 how the state of the trigger switch would change from non-conductive to conductive based on the voltage across the output lines.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited documents describe other systems/methods for controlling the power supply applied to an AC motor using reactive power measurements.
